I am an experienced full-stack web developer, skilled in user interface development, testing, and debugging in multiple languages. I bring significant expertise to the table with NodeJS, Golang, Rust, Typescript, Javascript, React, PostgreSQL, and MongoDB. I've done a lot of DevOps and end-to-end development, handling the design, installation, testing, and maintenance of web systems.

Education

2017-08 -
2021-05

B Tech: Computer Engineering, JC Bose UST - Faridabad

Work History

2020-06 -
Current

Fellow, Major League Hacking, New York, New York

- Contributed to Docusaurus, an open-source documentation website generator by Facebook
- Built a migration tool for migrating from version 1 to version 2 using Jscodeshift, Remark, and Rehype.

2020-04 -
Current

Freelance Writer, LogRocket, Boston, MA

Wrote several articles on various technologies:

- [Rust and Node.js: A match made in heaven](#)
- [9 Rust authentication libraries that are ready for production](#)
- [How to create an API with Strapi](#)
- [Easy documentation with Docusaurus](#)

2020-04 -
2020-06

Freelance Developer, Imazen, Aurora, Colorado

- Created fast bindings for Imageflow in Node.js using NAPI and more bindings in Golang using Cgo
- Automated release, building, testing, and docs using GitHub actions (Continuous Integration)

2018-08 -
2019-08

Software Developer, Cashpositive, New Delhi, Delhi

- Built invoice management and credit dispersal system in React.js, Node.js and React Native used by 100s of companies.

Articles

I love to write about emerging technologies. Here are a few more popular articles I've written:

- [A beginners guide to gRPC with Rust](#)
- [A Practical Guide for JWT Authentication](#)
- [Setting A React Project From Scratch Using Babel And Webpack](#)

Projects

- Bust: An open-source serve loader tester built using rustlang
- Elements-Culmyca: Event management website used by 400 users during University fest.
